

March 27, 2020

Attention: Chief Engineer, General Manger & Program Manager

Reason: Youtoo America Distribution Delivery Change **URGENT UPDATE**

To Whom It May Concern:

Youtoo America is moving to Galaxy 14!

After listening to several of our affiliates, we felt it best to delay our move to IP delivery until a later date. The technology exists, but the transition time per affiliate is a longer process.

That is the good news. Unfortunately our current satellite provider moved the change over date up to Tuesday, March 31st. That means we need to move everyone over by **Monday, March 30th at 11:59 pm**. This was not our choice and we are deeply sorry for any inconvenience this will cause.

We believe in most cases this is a quick transition, as all of our affiliates are already pointing to Galaxy 14 and there should be no need to change to a different receiver.

We need you to move Youtoo America from Galaxy 23 to Galaxy 14 by Monday, March 30th at 11:59 pm.

Here are the tech specs for Galaxy 14:

Galaxy 14

Transponder 10

Downlink Freq = 3.900 GHz

L-Band = 1250 MHz

Polarity = Vertical

Modulation = 29.079 MSym, 8PSK, DVB-S2

FEC = 5/6

Roll off 20%

Net ID = 1410

Ch = 40

Please direct any questions to Tim Larson at tim@youtooamerica.com.
